

REACH Self-Declaration of Conformity

Eccomelt declares that all products produced and/or supplied by Eccomelt are in compliance with Regulation (EC) No. 1907/2006 of the European Parliament and Council concerning the Registration, Evaluation, Authorization and Restriction of Chemicals (REACH). Specifically, our products are considered as Articles under the legislation as they comprise of 100% post-consumer A356.2 scrap aluminum alloy sourced exclusively from automotive aluminum wheels. While aluminum alloys are typically considered substances in their raw form (like ingots), once they are processed into standard semi-finished products like wheels, sheet, plate, and extrusions, they are considered Articles and are not subject to registration.

Furthermore, Eccomelt declares that currently:

- Eccomelt products do not contain any of the substances in a concentration greater than 0.1% by weight, as described in Article 67, including Annex XIV and Annex XVII and the Substances of Very High Concern (SVHC) list.
- Eccomelt discloses this information to the best of its knowledge, based on data supplied by our raw material suppliers and our process testing.

The current SVHC candidate list of 240 substances can be found at:
